

Name of Project

Inter Pipeline Heartland Petrochemical Complex E&I Buildings

Location

Nisku, Alberta

Project Summary

This project is one of our favorites! We worked with Makloc Buildings Inc. at their Nisku facility to provide Inter Pipeline with four incredible electrical buildings for their Heartland Petrochemical complex.

The building dimensions are 39m x 8m, 22m x 8m and 36m x 8m and came complete with the E&I supply and installation of electrical switch gear, control cabinets and network infrastructure.

One of our largest E&I buildings yet! Completed successfully, on time and on budget, with zero recordable injuries! The picture shows the second largest building being mounted on piles. Quite an impressive use of spreader bars!
